The American College of Healthcare Architects Board Certificate in healthcare architecture attests that the above-listed individuals have passed an accredited examination, which assesses the knowledge and understanding of architects who practice as healthcare specialists. These individuals join the ranks of over 400 ACHA colleagues in the US and Canada who have received this important architectural credential. ACHA requires its certificate holders to work towards the improvement of healthcare architecture on behalf of the public, to practice in an ethical manner and to maintain the highest standards in the specialized field of healthcare architecture.

### **MORE ABOUT ACHA:**

The American College of Healthcare Architects (ACHA) offers the only specialty board certification that is recognized by The American Institute of Architects (AIA).
